15. Website Design and Integration

Project webpage

The supplied website is based on the Nexa Bootstrap template and has been adapted for the title **Electric Vehicle Market Performance & Insights**. The page should remove irrelevant agency-template content and present the EV project as a data-analytics case study.

Required sections

- Hero: project title, short value statement, buttons to dashboard and story.
- About: objective and scope.
- Dataset: verified profile, key fields, and data caveat.
- Dashboard: embedded Tableau dashboard.
- Story: embedded Tableau story.
- Methodology: profile, quality audit, EDA, visualization.
- Findings: evidence-based findings from the final workbook.
- Limitations: unknown provenance, missing values, extreme values, and field definitions.
- Footer: tool credits and direct Tableau links.

Tableau embed details

Use the provided dashboard view path:

`ElectricVehicleMarketPerformanceInsightsDashboard_17930204313070/Dashboard12`

Use the provided story view path:

`ElectricVehicleMarketPerformanceInsights_17930198561320/Story1`

Keep each `tableauPlaceholder` ID unique. Include the official Tableau JavaScript embed code once per page where appropriate. Make embed width responsive and set height based on the published view. Provide links to the direct public views as fallbacks.

Website QA

- Verify public permissions.
- Confirm both dashboard and story load from a clean browser session.
- Test 360px-wide mobile view and desktop.
- Check that navigation anchors point to existing sections.
- Confirm no unrelated placeholder content remains.
- Avoid stating the website has been tested live until that test is performed.
