19. User Guide

Purpose

The webpage and Tableau views allow users to explore the attributes recorded in the supplied EV dataset.

Using the website

1. Open `index.html` in a modern browser or visit the deployed site.
2. Use the navigation links to reach the dataset, dashboard, and story sections.
3. Allow Tableau views to load; an internet connection is required.
4. If an embed is blank, open the direct Tableau Public link.
5. Review the page's scope and limitations before interpreting charts.

Exploring the dashboard

- Read the chart title, units, axis labels, legend, and active filters.
- Confirm whether a measure is a count, mean, median, or sum.
- Use category and region comparisons as dataset summaries, not automatically as market-share estimates.
- If a chart filters other charts, note the selected values before interpreting KPIs.
- Reset filters before comparing a new segment.

Troubleshooting

- **Blank visualization:** check connectivity, public permissions, and the direct view URL.
- **Slow loading:** open the view directly in Tableau Public.
- **Unexpected KPI:** reset filters and verify the aggregation and null handling.
- **Small mobile chart:** rotate the device or open the direct Tableau view.

Interpretation warning

The source methodology is not included with the CSV. Some field definitions, including annual sales and CO■ savings, require confirmation before being used for consequential decisions.
